

## Schools Sharing Technology

### AEE™ - Application Execution Environment

AEE™, the keystone of the new Ascent™ suite of products, gives customers the ability, through the use of a web browser, to define and run authorized web applications. In addition to new web applications in our standard Ascent products – such as SIS, FIS, EIS, and HRS -- AEE™ can launch customer-created applications that adhere to our development guidelines. AEE™ can also run 5250 (“Green Screen”) applications that have been defined in ACS™.

Following are key features of AEE™:

- Ability to run multiple applications concurrently
- Easy switching between active applications
- Single sign on
- Supports multiple organizations (clients), databases, and fiscal/school years
- Additional, even third-party-created, web apps can be easily added to menus
- Runs 5250 applications defined in ACS™
- Application sessions can be set to time out after a period of inactivity
- Means to define applications, menus, and settings – including security
- Means to setup new users and assign menus and security settings to them
- Hierarchical menu navigation or application launching via Favorites or Recently Used lists
- Runs RPG and ILE web applications
- Runs Java web applications located on one or more iSeries or other Java web servers
