Web Next Year Course Selection

This Web access program allows students to specify courses that will be taken in the following school year. Students select their courses from a list. The list can be the entire set of course offerings or a subset applicable to the student’s grade level or other criteria. A list can be further sub-divided by user-defined “groups” or “departments” to simplify the selection process.

As students save their course selections, they are written to an intermediate transaction database. As often as desired, a counselor approves/posts the items in the transaction database to the permanent Student database. Students enjoy using this program either in an individual setting or in a lab environment.
